ClinicOS

SYNTHETIC DEMO REPORT 02 · Investigation Summary

Patient: Aarav Sharma **ID:** CL-1024 **Age:** 24 years

Visit date: 26 June 2026 **Visit type:** Investigation review

Scenario: recurrent cough, intermittent wheezing and nasal allergy symptoms; evaluation for possible allergic asthma.

FICTIONAL DEMONSTRATION RECORD ONLY. Not a real medical record, confirmed diagnosis, or treatment instruction.

Reason for investigation

Evaluation of recurrent cough and wheezing with patient-reported dust-associated symptoms. All values below are fictional teaching data.

Illustrative laboratory results

Test	Demo result	Interpretation note
Total IgE	210 IU/mL	Non-specific; use the lab's reference range and clinical context.
Absolute eosinophil count	0.42 × 10■/L	Interpret with symptoms and lab-specific reference interval.
Spirometry	Not attached	Objective lung function testing may be considered by clinician.

Interpretation note

These fictional values do not confirm a specific allergy or diagnose asthma. Total IgE and eosinophil counts are non-specific and require clinician interpretation alongside history and other findings.
