ClinicOS

SYNTHETIC DEMO REPORT 01 · Initial Consultation Note

Patient: Aarav Sharma **ID:** CL-1024 **Age:** 24 years

Visit date: 12 June 2026 **Visit type:** New consultation

Scenario: recurrent cough, intermittent wheezing and nasal allergy symptoms; evaluation for possible allergic asthma.

FICTIONAL DEMONSTRATION RECORD ONLY. Not a real medical record, confirmed diagnosis, or treatment instruction.

Presenting concerns

Patient describes intermittent dry cough, sneezing and occasional wheezing, more noticeable at night and after cleaning a dusty room. Symptoms have occurred intermittently over several weeks.

Relevant history

- Possible environmental allergy symptoms reported by patient.
- Dust exposure is a patient-reported possible trigger, not a confirmed allergy test result.
- Medication and family history should be verified by the treating clinician.

Assessment & plan

Recurrent cough and episodic wheeze. Evaluate for asthma and allergic rhinitis as clinically appropriate. Review symptom pattern, exposure history and objective respiratory testing; provide individualized management after examination.
