ClinicOS

Patient History & Search Demo

Patient: Aarav Sharma **ID:** CL-1024 **Scenario:** recurrent cough/wheezing with possible allergy

DEMO ONLY — fictional patient and synthetic clinical data. Not for clinical use.

Four linked source reports

Visit	Date	Report	Search terms
01	12 Jun 2026	Initial consultation	allergy, dust, wheezing, cough
02	26 Jun 2026	Investigation summary	allergy, IgE, eosinophils
03	17 Jul 2026	Follow-up	allergy, trigger, wheezing
04	14 Aug 2026	Latest review	allergy, history, previous reports

Recommended UI presentation

1. Patient profile → Medical History → search box: “Search across 4 reports…”.
2. Searching “allergy” shows a result count and one card per matching source report.
3. Each result card shows report title, visit date, matching snippet, and Open PDF action.
4. Open the original PDF; jump to the matched page when page mapping is available.
5. Label evidence type: “Patient-reported trigger”, “Lab result”, or “Clinician-confirmed diagnosis”.
6. Keep the AI longitudinal summary separate from original documents, with source links and clinician review status.

Example search results for “allergy”

12 Jun 2026 — Initial consultation
“…sneezing and occasional wheezing, more noticeable after cleaning a dusty room…”
Source: Report 01 · Patient-reported history

26 Jun 2026 — Investigation summary
“Total IgE: 210 IU/mL; non-specific and requires clinical interpretation.”
Source: Report 02 · Synthetic lab data

17 Jul 2026 — Follow-up
“Dust exposure remains a suspected trigger based on patient observations.”
Source: Report 03 · Patient-reported trigger

14 Aug 2026 — Latest review
“No confirmed allergen-specific test result is included.”
Source: Report 04 · Longitudinal review
